6. MyWay (Nick)
This would be for people looking for more people or others going to the same place to in order to get a cheaper deal.

For example, this upcoming spring break, my friend and I were thinking that if we got a few more people we could split an airbnb to cut down on expenses. It would be nice to make a posting saying where we want to go, with all relevant information, such as how many people you have, how many you need, where you're going, how you're getting there, etc. Then, we could "interview" the applicants via webcam or similar.

This could be used for things other than travel, such as groupons. Users could browse and form a group for a groupon at a local restaurant or something.

I'm sure there are APIs for a video chat. There also must be some APIs for finding groupons, and probably some API to manage a forum/Craigslist/Ebay type thing.

This would be good for all kinds of things. Business and leisure travel, exploring new local spots, meeting new people, etc.
